

Developing and implementing customised solutions in organic waste recycling, compost operations and organic agricultural production to help offset carbon reduction emission's since 2003.

Our Goal

The goal of the company is to assist as many small-scale growers with our custom made worm farm systems to alleviate food waste going to landfill, affordable farming methods, relieve hunger and create employment.

Customised Worm Farms

Green Earth's customised worm farms are designed to save money and combat climate change. Designed to be robust and user friendly for our environmentally conscious customers.

Homeowners Worm Farm – (1.4 high x 600mm wide x 600mm long)

This handy little unit is suitable for townhouses or small family homes that use the bokashi system to recycle their food waste.

The homeowners worm farm is on wheels and is delivered complete with a bokashi /mulch mix for layering and instruction. Two bins for collecting food waste and storage of mulch. This unit captures vermicastings and has a built in screen on the lid for obtaining vermin-compost.

The (Worm tea / Liquid Fertilizer) is stored in a container with tap at the bottom of the unit.

- Reducing 9kg of foodwaste per month to landfill
- Produce approximately 2 wheelbarrows of vermin-compost per month
- Produce 30L of Worm Tea per day

The Medium Worm Farm (1sqm – 1m width x 1m height)

This unit is suitable for Schools, small holdings or larger residential homes and can handle up to 1 hectare.

The medium worm farm comes complete with irrigation inside, 200 liter pond that is oxygenated and delivered with a submersible pump, and a screen for vermicasting extraction.

- Reducing 1 ton of foodwaste per month to landfill
- Produce approximately 600kg vermicompost per month
- Produce 100L of Worm tea per day

Medium Worm Farm with pond and pump

Medium Worm Farm without pump

Green Earth Concepts
